A city still stands, glowing with artificial light and weak hope. The streets are quiet, the tall buildings strong, but danger is near. The guardians must act before it's too late.

Map 2: The Ancient Forest

A dense, untouched forest, lit by sunlight through the leaves. Big roots, old mossy bridges, slippery trails... But the balance of this place is fragile, and every step could anger nature.

Map 3: The Cloud Island

Weaknesses & Improvements

Dive into the unknown

Some team members were new to Unity, which slowed down progress.

→Better prepare the ground with common tutorials or a short initiation before the project.

A race against time

The tight 3.5-day deadline made every mistake more costly.

→Better define key steps from the start and prioritize tasks.

Unequal strengths

Skill levels varied, making task distribution challenging.

→Focus on complementary profiles, while encouraging mutual help and knowledge transfer.

Mastering the entire process

Managing animations, scripting, level design, and testing was overwhelming.

→Create specialized pairs to lighten the load and increase efficiency.

Ambitions to tame

Some ideas had to be dropped due to time and skill limitations.

→Learn to adjust our objectives to ensure a finished and coherent project.
